

Outsourcing Services

We can provide our outsourcing services like cleansing artifacts, printing note, washing the soil and creating registers of artifacts. We provide these services at our factory by receiving customers' artifacts. Here at our factory, we have "Soft Cleaner", a artifacts cleansing machine and "Jet Marker", an automatic note printing machine, both of which are our developed machines. In conjunction with our work of cleansing artifacts and printing notes on artifacts, we provide outsourcing services of creating artifacts registers and washing the soil. By using these outsourcing services based on our originally developed machines, you can save your total project time yet beautifully finished artifacts.

Excavated Artifacts Cleansing Service

Artifacts Cleansing Machine Soft Cleaner

We use our originally developed artifacts cleansing machine "Soft Cleaner" to provide our excavated artifacts cleansing service. Soft Cleaner cleanses artifacts one by one by spraying warm water over them. Since we do not use brush at all, we can remove dirt without wearing the surface of the artifacts. Besides earthenware, we can wash various kinds of artifacts gently and carefully. In comparison with manual work, which tends to result in different finishing qualities, Soft Cleaner can provide high finishing quality constantly, yet its cleaning time is multiple times faster than manual work. Accordingly, you can improve your work efficiency a lot.

Excavated Artifacts Marking Service

Automatic Artifacts Marking System Jet Marker

We use our originally developed automatic artifacts note printing machine "Jet Marker" to provide our excavated artifacts marking service. By using Jet Marker, we can print unified characters on various artifacts, which is not possible by manual operations. Regardless of the size of your artifacts and even for those artifacts on which manual marking is quite difficult, our Jet Marker can print characters that can be identifiable by anybody and your printed artifacts are returned back to you immediately. We make it sure that our outsourcing service meets your demand by showing the required result.

Artifacts Register Creating Service

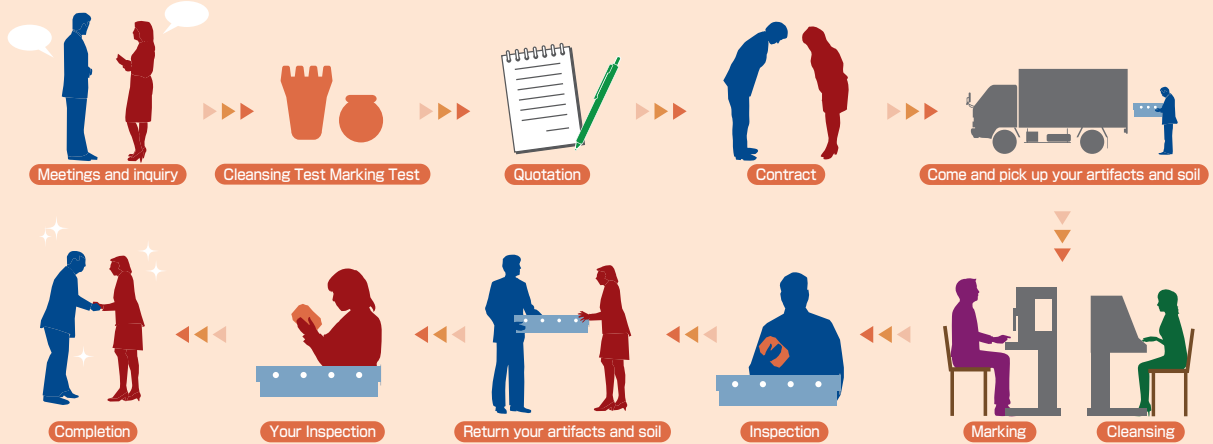

In association with our work of cleansing artifacts and printing notes on artifacts, we provide outsourcing services of creating artifacts registers. The register should improve your work efficiency, support the progress of your work and contribute to your artifacts data management in future.

Soil Washing Service

We can provide labor intensive and time consuming soil washing and artifacts picking work as our outsourcing business. We will categorize your artifacts found through this soil washing, and return them back to you in the categorized format so that it can help your further analysis.

Flow of our Outsourcing Services

Our Other Outsourcing Services

Earthenware Repair Services (Uniting and Restoring)

Uniting: Unite broken pieces

Restoring: Conduct fine finishing using precision electric tools

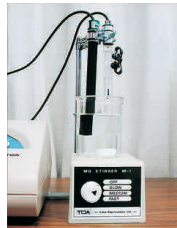

Color Correction: Put a color that match the surface of the artifacts. For detail, we will consult with your responsible person.

For complicated patterned earthenware or thin and fragile earthenware, please consult with us. We will unite and restore their pieces with high definition. Returning to be their original appearances, restored artifacts can serve for your exhibiting and teaching.

Wooden Tools and Metal Preservation Treatment

Cleaning: Remove dirt and rust as much as possible with the highest caution of not to damage the items

Desalination: This treatment is to remove salt content, which is one of causes of corrosion. (The picture shows measuring of the density of chlorine.)

Resin Impregnation: Impregnate artifacts with resin by keeping Them in a decompressed state.

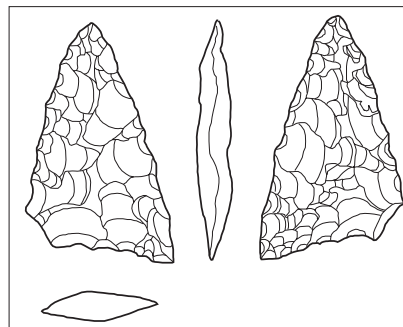

We conduct cleaning of your items and then coating them with synthetic resins in order to preserve the excavated items under better conditions.

Artifacts Measuring Service

We plot your artifacts and provide assistance for your reporting, recording and preservation work.

Artifacts Tracing Service

We conduct a tracing work of Measured drawings. Besides the conventional tracing, we can provide high precision digital tracing drawings by using our illustration device.
